

# Handle up to 69 Percent More ASP.NET Work on Microsoft® Azure® Dsv5 Virtual Machines Featuring 3<sup>rd</sup> Gen Intel® Xeon® Scalable Processors

ASP.NET

**Up to 60% more Requests/Second on Standard D2s\_v5 VMs Featuring 3<sup>rd</sup> Gen Intel Xeon Scalable Processors**

*vs. D2\_v2 VMs*

**Up to 47% more Requests/Second on Standard D4s\_v5 VMs Featuring 3<sup>rd</sup> Gen Intel Xeon Scalable Processors**

*vs. D3\_v2 VMs*

**Up to 69% more Requests/Second on Standard D8s\_v5 VMs Featuring 3<sup>rd</sup> Gen Intel Xeon Scalable Processors**

*vs. D4\_v2 VMs*

## With Docker Containers, Dsv5 Virtual Machines Outperformed Dv2 VMs with Older Processors

Selecting a cloud platform that can handle more requests per second on your ASP.NET development framework can improve response times for users and make them more likely to use your applications. To show how the processors powering these virtual machines (VMs) can affect performance, we tested two generations of Azure VMs with ASP.NET Core 6.0 on Docker containers: Standard Dsv5 VMs featuring 3<sup>rd</sup> Gen Intel Xeon Scalable processors, and Standard Dv2 VMs running on older processors. On a variety of scenarios including tests related to Plaintext, Json, Fortunes, and more, the Dsv5 VMs handled significantly more requests per second than their Dv2 counterparts. At multiple VM sizes (2vCPU, 4vCPU, and 8vCPU), Dsv5 VMs delivered consistently stronger ASP.NET performance, which means your organization could deliver a better app experience for end users no matter the size of your workloads.

### Performance on 2vCPU Virtual Machines

Figure 1 shows the relative ASP.NET performance of VMs with 2 vCPUs, where the Dsv5 VMs consistently yielded higher performance than Dv2 VMs—achieving up to 60% more requests per second.

#### Normalized 2 vCPU ASP.NET Core 6.0 Docker

Container requests per second | Higher is better

Figure 1. Relative test results comparing the requests-per-second rate of D2s\_v5 VMs enabled by 3<sup>rd</sup> Gen Intel Xeon Scalable processors vs. D2\_v2 VMs enabled by older processors.

## Performance on 4vCPU Virtual Machines

As Figure 2 shows, on VMs with 4 vCPUs, Dsv5 VMs with 3<sup>rd</sup> Gen Intel® Xeon® Scalable processors handled up to 47% more requests per second than the Dv2 VMs with older processors did.

Figure 2. Relative test results comparing the requests-per-second rate of D4s\_v5 VMs enabled by 3<sup>rd</sup> Gen Intel Xeon Scalable processors vs. D3\_v2 VMs enabled by older processors.

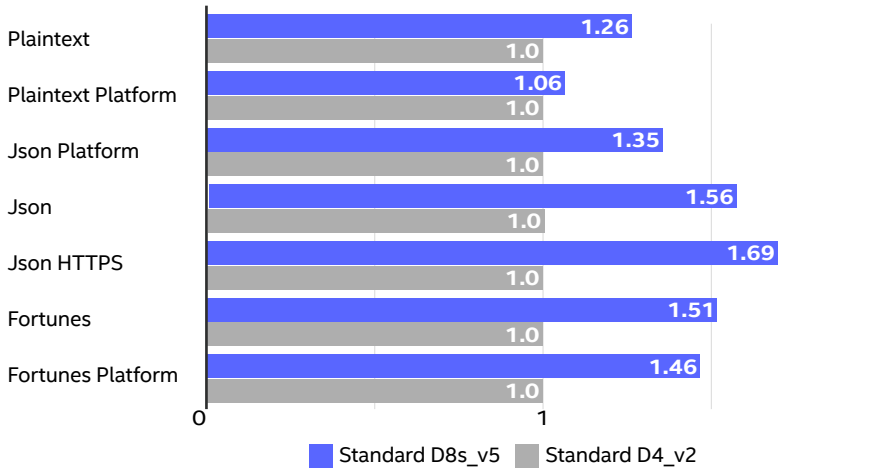

### Normalized 4 vCPU ASP.NET Core 6.0 Docker

Container requests per second | Higher is better

### Normalized 8 vCPU ASP.NET Core 6.0 Docker

Container requests per second | Higher is better

## Performance on 8vCPU Virtual Machines

As Figure 3 shows, the newer 8vCPU Dsv5 VMs with 3<sup>rd</sup> Gen Intel Xeon Scalable processors handled up to 69% more requests per second on an ASP.NET workload as the 8vCPU Dv2 VMs with older processors did.

Figure 3. Relative test results comparing the requests-per-second rate of D8s\_v5 VMs enabled by 3<sup>rd</sup> Gen Intel Xeon Scalable processors vs. D4\_v2 VMs enabled by older processors.

Across VM sizes, selecting newer Azure Standard Dsv5 VMs with 3<sup>rd</sup> Gen Intel Xeon Scalable processors can give your ASP.NET Core 6.0 apps a performance boost that allows you to give your end users a more responsive app experience.

## Learn More

To begin running your workloads on Azure Dsv5 VMs with 3<sup>rd</sup> Gen Intel Xeon Scalable processors, visit <https://docs.microsoft.com/en-us/azure/virtual-machines/dv5-dsv5-series>.

Tests by Intel completed March 2022. All tests on Azure WestUS 2 Region with Ubuntu 20.04.2 LTS kernel 5.8.0-1036-azure and ASP.Net Core 6.0. Instance details: Standard D2s\_v5: Intel Xeon Platinum 8370C CPU @ 2.8GHz, 2 vCPU, 8GB RAM; Standard D4s\_v5: Intel Xeon Platinum 8370C CPU @ 2.8GHz, 4 vCPU, 16GB RAM; Standard D8s\_v5: Intel Xeon Platinum 8370C CPU @ 2.8GHz, 8 vCPU, 32GB RAM; Standard D2\_v2: Intel Xeon Platinum 8370C CPU @ 2.80GHz, Intel Xeon Platinum 8272CL (Cascade Lake), Intel Xeon 8171M 2.1GHz (Skylake), Intel Xeon E5-2673 v4 2.3 GHz (Broadwell), Intel Xeon E5-2673 v3 2.4 GHz (Haswell), 2 vCPU, 7GB RAM; Standard D4\_v2: Intel Xeon Platinum 8370C CPU @ 2.80GHz, Intel Xeon Platinum 8272CL (Cascade Lake), Intel Xeon 8171M 2.1GHz (Skylake), Intel Xeon E5-2673 v4 2.3 GHz (Broadwell), Intel Xeon E5-2673 v3 2.4 GHz (Haswell), 4 vCPU, 14GB RAM; Standard D8\_v2: Intel Xeon Platinum 8370C CPU @ 2.80GHz, Intel Xeon Platinum 8272CL (Cascade Lake), Intel Xeon 8171M 2.1GHz (Skylake), Intel Xeon E5-2673 v4 2.3 GHz (Broadwell), Intel Xeon E5-2673 v3 2.4 GHz (Haswell), 8 vCPU, 28GB RAM
