Bringing Flexible and Affordable Cloud to Small and Medium-sized Enterprises Across South Africa

Through its managed services business, IntDev creates tailored cloud environments that deliver dependable performance, reliability, and scalability for a wide range of clients in South Africa. With its existing cloud infrastructure nearing capacity, the company realized that it needed a fresh approach. The aim was to enable seamless scalability while ensuring reliable, high-performance cloud services for clients around the clock. Lenovo partnered with Cloudistics to create a next-generation software-defined infrastructure based on the Lenovo ThinkAgile platform, powered by 2nd Gen Intel® Xeon® Scalable processors. With Lenovo ThinkAgile servers powering its cloud and managed services, IntDev has increased system performance, achieved significant cost savings, and is boosting client satisfaction.¹

“While Lenovo’s support for the Cloudistics platform was a key plus for us, it was clear that the Lenovo ThinkAgile platform would deliver superior system integration, reliability, and availability compared with our existing hardware. And with the 2nd Gen Intel Xeon Scalable processors built into the Lenovo solution, we were confident that we would see significant performance improvements, too.

Pedro Maia, Managing Director, IntDev
